

Conformal regions in the loop: test episode 0, alpha = 0.1, calibrated q = 0.68 m

grey: true obstacle, unknown to the robot (red once struck) orange dashed: detection
purple: conformal region, the detection grown by q blue dashed: the current plan blue square: the robot's footprint

planning on the raw detections

planning on the conformal regions

over the study's 200 test episodes: collisions 168 on the raw detections, 16 on the conformal regions; held-out coverage 0.9037 at target 0.9
